More than just headsets

CeoTronics has established itself as the premier global provider of networks and of high-quality communication headsets and systems for professional use.

CeoTronics audio, video and data products enable a more effective work flow and increase working safety in difficult environmental and operational conditions, for example, during noise, danger, in covert operations, when wearing protective suits, helmets and respiratory masks, or when both hands have to be free for the actual work.

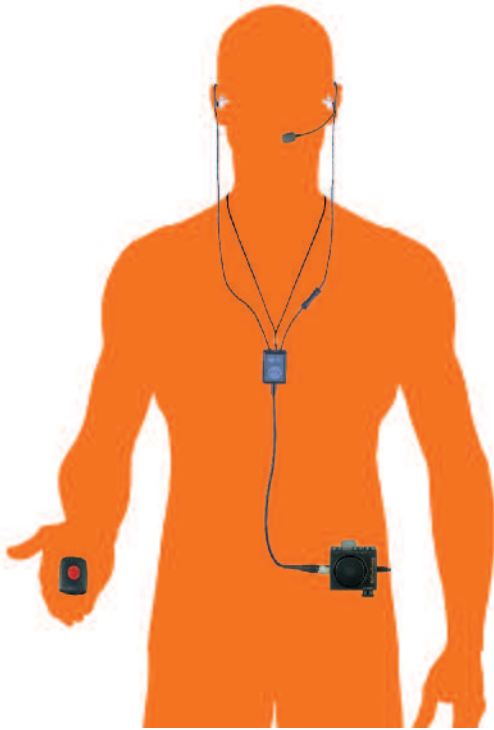

Leading performer in the premium segment

Since its foundation in 1985, CeoTronics has positioned itself at the peak of the quality and service pyramid complete with the highest quality of advice and consultancy, customer proximity, and the best product quality in the three "F's", Form, Fit, and Function. CeoTronics flexibility, along with the continued adaptation of the latest technologies provides for the absolute best customer products as well as customized system solutions.

Individual solutions for police, border police, customs and military

Collaboration with the state security and police authorities demands a high level of discretion. Together with the users CeoTronics develops audio, video and data systems for operations during covert investigations and personal protection, for daily police work and for special unit operations and, of course, handle them confidentially.

The bodyguards of high-ranking politicians in Germany and abroad, of state presidents and members of royal families rely on the precision and comfort of CeoTronics systems.

Used by fire, emergency and rescue services

Secure communication with a high transmission quality is vital for firefighting and emergency services. Where firefighting and rescuing people are involved, misunderstandings and time-consuming queries resulting from comprehension difficulties can even cost lives. Lifesavers must therefore be able to rely one hundred percent on their equipment. Fire and rescue services count on the CeoTronics communication competence.

In addition, CeoTronics offers the largest selection of different high-quality products in explosion-protected ATEX design.

Industry, Services and Sports

Airports, Airline and Air Force

Communication systems for industry, services and sports

CeoTronics communication systems have diverse uses and fulfill the individual requirements of extremely different branches of industry, e.g. machine construction, the automotive industry, paper manufacturers or the aerospace industry. Nearly all major electricity generating companies in Europe, oil platforms and many refineries rely on CeoTronics products.

In addition, our radio communication systems are used in the leisure industry, by service providers and transport companies and in motor sports.

On the ground and in the air – communication solutions for airports, airlines and the air force

Worldwide, over 200 airlines, airports and ground handling service providers rely on products from CeoTronics. As the market leader in high-quality ground-to-cockpit communication we offer perfect system solutions for use in all areas in which the secure transmission of every single word is essential.

Our broad product range contains systems for ramp handling, push back, de-icing, cockpit communication and airplane maintenance. CeoTronics also has a broad range of communication systems available for airport fire-fighting services and security staff.
